

# ARTICLY

Tanya Tan | Gary Kwan | Jonathan Raysor | Steven Hulse | Taimoor Hafeez

## What is Articly?

Articly is a web based application that presents its users with New York Times articles custom tailored to their liking and interests.

## What technology will back Articly?

- Java Spring Boot Library (RESTful API)
- JavaFX (Front-end User Interface)
- Google's Firebase Database (Database Management)

## User Storyboards

### 1. Comment Section

- As a reader I would like to be able to comment on articles that were selected for me.
- A comment section will help me create more conversation and find other people with similar interest.

### 2. Summaries

- As a reader I would like to see a summary or preview of each article.
- With this feature I'd be able to decide whether or not I really want to read an article that was selected for me.

### 3. Sections

- As a reader I would appreciate the capability to view categories (i.e. most shared, most viewed, most emailed, etc).
- This is would allow me to discover more content and become more involved in the Articly community.

### 4. Time Stamps

- A timestamp of when article was published.
- This will give me the capability to know if I need to refresh my application.

### 5. Search

- The ability to search up different articles.
- This feature would give me the most relevant articles related to my search.
